Max Siebengartner

503-358-6332 | max@siebengartner.com | linkedin.com/in/maxsiebengartner | github.com/MaxRS07 | Boston, MA

Available for Co-op: January – June 2027

EDUCATION

Northeastern University, Khoury College of Computer Sciences **Boston, MA**

B.S. Computer Science, Concentration in Artificial Intelligence *Expected April 2029*

- Coursework: Algorithms and Data, Theory of Computation, Data Science, Foundations of Cybersecurity

TECHNICAL SKILLS

- **Languages:** Rust, Python, TypeScript, JavaScript, SQL
- **Frameworks & Libraries:** React, Next.js, Tauri, FastAPI, Tailwind CSS, scikit-learn, neural networks
- **Systems & Tools:** RISC-V, QEMU, Linux, Git, Supabase/Postgres, WebSockets, REST APIs, Figma, MCP servers, Docker

EXPERIENCE

Research Intern **May 2026 – July 2026**

Hyperlayer *Hong Kong*

- Designed 2 complete application flows in Figma for global banking clients on Hyperlayer's fintech SaaS platform
- Collaborated with the client to workshop screens across 4 design review meetings, iterating on feedback each round
- Researched market opportunities and represented Hyperlayer at LEAP East and Accenture conferences, adapting solutions to client needs

Back End Developer **January 2026 – March 2026**

Oak Ridge National Laboratory *Oakland, CA*

- Developed back-end architecture for a web app predicting polymerization conditions with a neural network
- Built the Docker hosting prototype that containerized the model and served predictions to the front end
- Selected through Northeastern's Oakland practicum program to build software on a 5-student team alongside ORNL researchers

AI Consultant **November 2025 – January 2026**

Northeastern University *Boston, MA*

- Delivered AI consulting to California small businesses as part of a selected programming team
- Built AI tools using MCP servers and Claude Connectors to guide local companies through filing for California business certifications

Information Services Intern **July 2024 – August 2024**

U.S. Department of State, Consulate General Hong Kong *Hong Kong*

- Automated the IT ticketing workflow with a JavaScript script in Microsoft Power Automate, routing tickets to the correct IT staff, gating on approvals, and logging completion status to Excel
- Wrote a Python utility interfacing with a USB card reader to scan decommissioned access cards and log matched card numbers to Excel, replacing manual entry
- Configured network infrastructure, lighting, and AV setup for consulate event spaces

Software Engineering Intern **September 2023 – May 2024**

The Chinese University of Hong Kong *Hong Kong*

- Developed a regression model in Python with scikit-learn to interpret classroom communication input
- Built a companion app around the model helping autistic students communicate with teachers

PROJECTS

Max OS | Rust, RISC-V, QEMU | github.com/MaxRS07/max_os *June 2026 – Present*

- Built a freestanding no_std kernel booting on RISC-V under QEMU, including boot assembly and MMIO
- Implemented virtual memory paging, a kernel heap allocator, and thread-safe synchronization primitives
- Designed a custom filesystem with its own on-disk format, plus virtio block/input drivers and a 2D framebuffer graphics library

Notion Hub | Tauri, Rust, React, TypeScript | github.com/MaxRS07/notion-integration *Dec 5, 2025 – Feb 5, 2026*

- Developed a Tauri desktop application connecting the Notion and Canvas LMS APIs to automate data syncing and workflow management
- Built a visual automation editor with drag-and-drop action blocks, trigger logic, and field mapping
- Implemented token-authenticated API integrations and a React + TypeScript front end with multi-theme support

NovaTest | Next.js, FastAPI, Amazon Nova Act, Supabase | github.com/MaxRS07/nova-test *Feb 14, 2026 – Mar 15, 2026*

- Built an AI browser testing platform launching autonomous Amazon Nova Act agents to find UI defects, visual errors, and broken user flows without hand-written test scripts
- Implemented a realtime pipeline with Supabase Realtime and WebSockets, streaming agent logs, reasoning traces, and detected faults to the frontend as tests run
- Connected a Next.js/Tailwind frontend with a FastAPI backend and Supabase Postgres persistence for results that survive reloads
